

PROVEN. PREFERRED. **PROFESSIONAL.**

A global company with a focus on the individual customer.

The Fernco Joint Sealer Company was formally established in 1964 by an individual contractor looking for a time saving and reliable solution to his pipe connection needs. Mr. Zopf developed a pre-formed tar donut for use on his own jobs in the Detroit area during the late 1950s.

Word spread of his invention as other contractors wanted to take advantage of this labor saving product and purchased them directly from Mr. Zopf, who set up a small shop in a garage behind his plumbing business.

Since the beginning, Fernco has continued to grow into more markets and has continued to develop innovative, reliable and easy-to-use products. Fernco expanded into Canada and then to the West with a location in Reno, Nevada. In August, 2002, Fernco, Inc. acquired Flexseal Couplings LTD, the leading manufacturer of flexible couplings in the European market. Flexseal manufactures and distributes couplings in the United Kingdom and Europe. The Flexseal acquisition positions Fernco, Inc. as the number one manufacturer and distributor of flexible couplings in the world.

All of this growth is not to make Fernco the biggest company, but the best company. With resources from around the world, Fernco is able to tap into many innovative minds to create the best products to meet the needs of the individual in the field, trying to get the job done, and done with confidence. From a company that started with one individual, it all comes down to our focus on the individual customer and providing you with a product you can trust.

Installation Instructions

1.
Core a perpendicular hole to the main line:
- 5" hole for 4" pipe inlet
- 7" hole for 6" pipe inlet
- 9" hole for 8" pipe inlet

2.
Using sand paper or a file, clean and remove any burrs from opening.

3.
Remove band clamp from QwikSeal, fold and insert into opening. Unfold.

4.
Pull up on QwikSeal until it stops against the inside of the pipe.

5.
Measure the depth of the QwikSeal, from the pipe stop to the top edge.

6.
Measure the depth of the fitting to be attached to the pipe stub.

See alternative method below.

7.
Add the dimensions of the QwikSeal and the fitting and cut a stub to that length.

8.
Bevel the leading edge of the pipe stub for easier insertion into the QwikSeal.

9.
Lubricate the QwikSeal and pipe stub.

10.
Start the pipe stub into the QwikSeal by hand.

11.
Using a hammer and block of wood, drive the pipe stub to the QwikSeal pipe stop.

12.
Install the band clamp at 60 in-lbs torque.

13.
Install pipe fitting. Fitting should sit flush with the surface of the QwikSeal.

Alternative methods to stub and fitting:

Bell End Pipe: You may also use the bell end of a piece of SDR-35 or SCH-40 instead of the stub and fitting method. After measuring the depth of the QwikSeal in step 5, transfer this measurement to the bell end of your inlet pipe, measuring from the bell. (Figure A) Proceed with steps 8 - 12.

Street Fittings: Street fittings may also be used with QwikSeal. (Figure B)

Connect lateral pipe and check for leaks prior to backfilling.

Max operating temperature: 180° F / 82° C

TECHNICAL SPECS

Ultimate Shear Resistance - .012" (12mil) 300 series stainless steel shear ring offers greater sealing force on corrugated pipe and ensures a water tight seal is maintained.

Ultimate Pipe Alignment - Due to the thickness and strength of the shear ring, you are assured consistent pipe alignment against shear forces from soil compaction, shifting and settling.

Ultimate Sealing High Torque Clamps - 301 series stainless steel **High Torque Clamps**, offering greater sealing power and excellent corrosion resistance. All 10 inch diameter couplings are 6 inches wide with 2 clamp areas, and all 12 inch diameter and larger couplings are 10 inches wide with 4 clamp areas.

Ultimate Sealing Gasket - The flexible PVC gasket has a smooth inside surface providing greater sealing performance than ribbed rubber gaskets. The smooth internal wall of the gasket makes contact 360° over its entire length. This equates to a larger sealing surface and a higher coefficient of friction, providing maximum sealing capabilities as well as preventing slippage under the weight of shear forces.

SHIELDED COUPLINGS

No-Hub Couplings

Engineered to connect No-Hub cast iron pipe.

SHIELDED COUPLINGS

Choose the No-Hub Coupling with the patented shield design that provides maximum transfer of pressure from the clamps - to the gasket - to the pipe. Engineered to connect no-hub cast iron pipe in applications replacing the less-efficient hub and spigot.

NO-HUB TECHNICAL SPECS

Patented Bi-Directional Shield Design

The shield will adjust to variations in diameters and circumferences of the pipes being joined, thereby eliminating leak paths. The patented, bi-directional corrugations exert sealing pressure in both parallel and transverse patterns on the gasket and pipe, providing a positive, reliable seal.

Interlocking Clamp Design

The clamps feature a one-piece screw housing that mechanically interlocks the housing to the band. This one-piece housing design eliminates leak paths that can occur in staked or welded clamps.

Specially Beaded Gasket

Made of an elastomeric compound that meets the requirements of ASTM C564 and features a series of strategically positioned grooves and beads. When tightened, the shield mates with these grooves and beads to exert exceptional sealing pressure and holding power to prevent "pull out" failures.

Floating Eyelet Design

Floating eyelets fasten the clamps to the shield, allowing the clamp band and shield to move independently. This freedom prevents the shield from crimping during tightening, which can lead to leakage later on.

Fernco Flexible Couplings

The industry standard for sewer, drain, waste & vent piping.

Specially formulated PVC compound positively seals any sewer and drain connection.

Because of their quality and ease of installation, Fernco Flexible Couplings have found wide acceptance among sewer and plumbing contractors and municipalities. Fernco couplings are used for all types of in-house and sewer applications: drain, waste, repairs, vent piping, house-to-main, cut-ins, conductor and roof drains and increasers-reducers.

Made of tough elastomeric polyvinyl chloride (PVC), they are strong, resilient and unaffected by soil conditions. They are also resistant to chemicals, ultraviolet rays, fungus growth, and normal sewer gases due to the inert nature and physical properties of the material. And they are leakproof, rootproof and seal against infiltration and exfiltration.

Tested designs backed by over four decades of proven performance.

- Positive seal against infiltration and exfiltration
- Leakproof, rootproof and are resistant to chemicals, ultraviolet rays, fungus growth, and normal sewer gases
- Conforms to ASTM D 5926, C 1173 and CSA B602
- Connects pipes of same or different sizes and materials quickly and easily
- Stainless steel clamps are corrosion-resistant and rustproof

Maximum test pressure: 4.3 PSI (29.6 KPA)

Maximum operating temperature: 140° F nonconsistent

For further information on code approvals, please contact the Fernco Customer Service Department.

Concrete Manhole Adapters

Help eliminate leaks around pipes entering manhole walls.

CMAs are flexible enough to permit lateral pipe movement without destroying seal integrity. It is particularly useful for pipe to which concrete will not adhere, such as plastic pipe.

The CMA is made of elastomeric PVC, is corrosion proof and is unaffected by acid or alkali, however the CMA is subjected to many various conditions that are beyond the manufacturer's control. High ground water tables, quality of grout, workmanship and field conditions can affect its ability to seal. Discretion must be used in its application and installation.

Part No.	Description
4 CMA	4" (101mm) I.D. Pipe
6 CMA	6" (152mm) I.D. Pipe
8 CMA	8" (203mm) I.D. Pipe
10 CMA	10" (254mm) I.D. Pipe
12 CMA	12" (304mm) I.D. Pipe

Due to the many varying factors that can influence the CMA's effectiveness as a seal, Fernco does not warrant this product as a positive water seal.

Large Diameter CMAs

For sewer pipe that is 8" and larger.

LDCMAs are flexible enough to permit lateral pipe movement without destroying seal integrity. It is particularly useful for pipe to which concrete will not adhere, such as plastic pipe.

The LDCMA is made of elastomeric PVC, is corrosion proof and is unaffected by acid or alkali, however the LDCMA is subjected to many various conditions that are beyond the manufacturer's control. High ground water tables, quality of grout, workmanship and field conditions can affect its ability to seal. Discretion must be used in its application and installation.

Order by specifying the outside diameter (O.D.) of the pipe which is to receive the waterstop. Minimum size: 8.5 inches O.D. (55.6mm O.D.)

Due to the many varying factors that can influence the LDCMA effectiveness as a seal, Fernco does not warrant this product as a positive water seal.

Fernco Donuts

Sewer pipe compression joint seal.

Fernco Donuts are flexible PVC donut-shaped rings for the compression sealing of sewer pipe joints and DWV connections such as sockets, hubs, bells and spigots. They offer all of the properties necessary to create a strong, lasting joint.

Fernco Donuts are available in hundreds of sizes and configurations for use with most brands and types of piping material.

How To Order

Donuts can be ordered by giving the size, material and type of connection you want to make. Donuts require specific information on the manufacturer of pipe. Our sales coordinators are trained to assist you.

Donuts can also be ordered by dimensions. Donuts seal by compression and have much less dimensional range than couplings. The bell, hub or socket dimensions must be given within 1/32" accuracy.

For plain end pipe connections, use a Fernco Flexible Coupling - Listed on pages 14-15.
